

RED TRIDENT INC

DESIGNED BY OT PROFESSIONALS FOR OT PROFESSIONALS.

# SECURING INDUSTRIAL INFRASTRUCTURE

## THE RED TRIDENT ADVANTAGE

We are OT cybersecurity experts that come from production and manufacturing. We understand how to build security into operations... not on top of it.

**ASSESS** Not all assessments are created equal, just as no two customers are the same. Our assessments match to our customers maturity levels. No matter your maturity, we can help you understand your current state and help you develop a plan to get your organization to the security posture you require.

**REMEDiate** There are a lot of intricate details that go into designing and remediating an OT environment. Red Trident has immense experience on detailing and implementing solutions for even the most critical operations and can also train your workforce if desired.

**MONITOR** OT systems are unique and so are the requirements to monitor and identify a potential compromise or nefarious activity. If your team does not have the bandwidth or knowledge of the latest tactics, techniques and procedures used by adversaries today, our OT security team can be an extension of your team and monitor your environment for you.

**RESPOND** Our response services match our customers needs. If you are concerned you may have been breached and need someone to confirm it, or you know you have an incident and need help in handling it for your OT systems. Our experts are prepared to support you when you need it most. Red Trident also partners with some of the best IT incident response teams to provide our customers with holistic incident response coverage in both IT and OT.
